iOS App Permissions

If you use Vibe Rides on iOS, we'll ask you for permission to enable certain features when they require additional information from your device. (If you're an Android user, please see our [Android App Permissions](http://www.viberides.com/) document at <http://www.viberides.com/>)

Below are more details on the permissions we ask for and the data we collect. You can edit your Vibe Rides permissions anytime by going into the Settings app on your device.

Location Services

You'll see a request for permission to access your location information when you sign up for Vibe Rides. As a default, the app asks for your location "while using the app." If you opt in, the app will collect and send location data to Vibe Rides servers while you're using the app. We use location data to find drivers that are near you and help them navigate to your pickup spot. We also use it to display trip history in your receipts, to understand and resolve support tickets, to troubleshoot and solve software bugs, and generally to customize and improve the location-based services we provide.

If you opt out of the location permission, you can still use Vibe Rides by manually entering your pickup address before requesting a ride. Learn more about your location choices in our app.

Contacts

We'll ask you for permission to access your contacts if you choose to use certain features such as when you refer a friend to Vibe Rides, split a fare, or share your ETA.

If you opt in, the app will be able to access the address book on your phone and display the contacts within the Vibe Rides app so you can easily scroll and select the right contact without jumping between apps. Vibe Rides will not share your contacts with anyone else or reach out to any of your contacts on your behalf without your permission.

If you choose not to use this permission, you can manually enter contact information anytime you split fares, share an ETA, refer a friend, or use other social features in the app.

Push Notifications

After you sign up for Vibe Rides, but before you request your first ride, you'll be asked to choose whether you want to receive push notifications. If you opt in, the Apple Push Notification Service generates a unique token for your device and shares it with Vibe Rides so we can send Push Notifications to your phone.

If you opt out of Push Notifications, you'll still receive updates about your Vibe Rides trips by text message (these communications are not optional) and as well as email receipts. You can update your preferences in your phone's Settings app.

Microphone

In some regions, riders and drivers can talk to each other while the driver is en-route to the pick-up spot, without relying on the phone app or telephone networks. In these markets, we ask for the microphone permission to enable that feature and it is only used to facilitate rider-driver communication. If you opt out of this permission, you'll still be able to call your driver through your phone app using the anonymized number provided in the Vibe Rides app.

Camera

The Vibe Rides app will ask to access your camera when you add a photo to your Vibe Rides profile (if you select "Take New" instead of "Choose Existing") or when you scan your credit card and add it to your account. This is faster than entering the number by hand, but you can still choose to do so manually. Vibe Rides doesn't store the image of your credit card. You can still add an existing photo to your user profile by granting access to your Photos (see below).

Photos

You'll see this dialog when you add an existing photo to your Vibe Rides user profile. If you don't want to provide access to your Photos, you can take a new photo for your Vibe Rides user profile by providing access your phone's Camera (see above).
